

## Model Development Phase Template

Date	15 March 2024
Team ID	740012
Project Title	<b>Predicting IMF-Based Exchange Rates: Leveraging Economic Indicators for Accurate Regression Modeling</b>
Maximum Marks	4 Marks

### Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

#### Initial Model Training Code:

```
from sklearn.model_selection import train_test_split
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2, random_state=42)
```

```
from sklearn.linear_model import LinearRegression
from sklearn.linear_model import Ridge
from sklearn.metrics import mean_squared_error, r2_score
from sklearn.ensemble import RandomForestRegressor
from sklearn.svm import SVR
from sklearn.linear_model import Lasso
import xgboost as xgb
```

## Random Forest Regressor

```
7]: model14=RandomForestRegressor(n_estimators=100, random_state=42)
model14.fit(X_train,y_train)
```

```
y_pred=model14.predict(X_test)
mse=mean_squared_error(y_test, y_pred)
r2 = r2_score(y_test,y_pred)
print("Mean Squared Error:", mse)
print("R-squared Score:", r2)
```

Mean Squared Error: 43.42457074286648  
R-squared Score: 0.9796780547753188

```
7... kmeans = KMeans(n_clusters=3)

kmeans.fit(df)
centroids = kmeans.cluster_centers_
labels = kmeans.labels_

plt.figure(figsize=(8, 6))
plt.scatter(centroids[:, 0], centroids[:, 1], c='red', s=200, marker='x', label='Centroids')

plt.title('K-means Clustering')
plt.xlabel('Feature 1')
plt.ylabel('Feature 2')
plt.legend()
plt.grid(True)
plt.show()
```
